# California Solar & Electric: Solar Lease Options

## A Smarter Way to Go Solar

At California Solar & Electric, we believe clean energy should be simple, affordable, and accessible. Solar lease lets homeowners and businesses enjoy the benefits of solar power without the upfront cost of buying a system.

## How Solar Lease Works

With a solar lease, the system is owned by the lessor, while CS&E installs and maintains the solar equipment on your property. You pay a monthly rate for the clean energy the system produces, without the responsibility of system ownership.

### Here's what happens step-by-step:

1. Our engineers design a custom solar and battery backup system for your home or business based on your energy usage, roof layout, location and property-specific factors.
2. CS&E manages all permits, installation, inspections, and interconnection applications.
3. You pay an agreed-upon rate designed to be lower than your utility rate and begin saving right away.
4. CS&E handles system monitoring, performance checks, and warranty management for the life of the agreement.

## Why Choose Solar Lease Options with CS&E

- Start without a down payment
- Immediate savings
- Best Suited For Cost-focused homeowners
- Premium equipment. We install high-quality panels and batteries from trusted manufacturers

## Built for Homes and Businesses

- **Homeowners:** Solar and battery backup systems that lower monthly energy costs and provide savings all year-round.
- **Businesses:** Commercial systems that reduce or eliminate your electric bill.

All systems are designed for long life and supported by our local service team and industry warranties.

## Why Choose California Solar & Electric

We are a BBB-certified, 5-star rated green energy company committed to honest guidance, transparent pricing, and exceptional service. Our goal is to make clean energy practical for all people, not just a luxury.

With CS&E, you get:

- A partner who handles everything from start to finish
- A clear, fair lease agreement with no surprises
- A system built with premium components and careful craftsmanship
- Continuous system monitoring and responsive local support

We take pride in helping homeowners and businesses **reduce energy costs and move toward cleaner energy.**

# Solar Lease Frequently Asked Questions

## 1. What is a solar lease?

The lessor owns the solar system installed on your property. You pay a monthly fee that's typically lower than your utility bill. It's a hassle-free way to go solar with no upfront cost.

## 2. How does Solar Lease differ from buying a solar system?

When you buy a system, you own the equipment and handle maintenance and warranties. With solar lease, the lessor owns and maintains the system, and you pay a monthly fee.

## 3. What costs are covered under Solar Lease?

Design, installation, monitoring, warranty management, and performance checks are all included.

## 4. Can I prepay or buy the system later?

Yes. You can prepay the full remaining balance and own the system outright. See your agreement for details.

## 5. How much can I expect to save?

Savings vary depending on your energy usage and roof conditions, but most customers save 40% to 80% compared to their utility rates.

## 6. What happens if I move?

You can transfer the lease to the new homeowner, or pay off the agreement before selling. Many buyers view a solar lease as an added value since it lowers utility costs.

## 7. Is maintenance included?

Yes. CS&E handles monitoring and warranty service throughout the lease term.

## 8. What equipment do you use?

We partner with leading solar panel, battery and inverter manufacturers to ensure reliability, high performance, and long-term efficiency.

## 9. How do I get started?

Schedule a free consultation with our team. We'll design a system, show you projected savings, and handle everything from permits to installation, you just enjoy the benefits of clean, affordable energy.
